

First office hours meetings Questions

Climate Neutral

Group 19

We did not get a chance to ask questions in the first interaction with business and below are the questions we sent over the email.

1. Can you give us an example of working Linear scoring algorithm that includes Min and Max values?
2. What is the relationship between factors with weight and direction to optimize?
3. Will the UI design be provided by you, or do we have to make our own design template?
4. Can you please brief up about user Authentication and file saving?
5. Can you please provide some data samples to study so that we can understand and analyze?

Questions we again refined and discussed in the first office hours meeting.

6. How many plots are expected? Do we need to give an overall recommended scenario plot, or we can granularizes to category level and different score level?
7. File results must be saved in which file format? It is mentioned that it has to be txt file format, but can we implement other light weight file formats like Json?
8. What is the relationship of different formulas and related to various steps and how text values are handled in formula?
9. Brief about the categories and scenarios to get clarity for pop up model information?
