

**Course Name**

COMP8967-1-R-2023F | Internship Project I

Document Type

Office Hours Meeting 3 Questions

Professor

Dr. Kalyani Selvarajah

Team - Members**Student ID**

Manjinder Singh	110097177
Harbhajan Singh	110100089
Karan Vishavjit	110099867
Dhrumil Limbad	110097066
Ajwad Maahi	110096720

To begin with, Team will be presenting the solution development so far to the stakeholder from Climate Neutral for their feedback, so that Team progress will be aligned to the expectation of the client, Mr. Kyle.

Then the team will request for more information related to the following set of questions that we would like to present for discussion during the forthcoming kick-off meeting:

1. We are planning to welcome the user with “Hello [Username]” on the application’s main page. So, storing the user’s email and username in local storage will be fine with you?
2. While calculating the linear score for each category based on the linear scoring formula there will always be one case in which value will be zero, this case is expected?
3. Rotating the Table Header by a certain angle is possible but that will require the table to overflow and therefore will need to be completely transparent. Will that be fine with you?
4. The functionality we are planning for landing page is giving login and signup buttons and few other details. Can we use climate neutral website as reference for this or you want us to add some details?

Current flow Landing page > signup/login > MODM Page > sign-out > landing page

Well, the team (Group 19), presented the solution to Dr. Kalyani on November 07, 2023, at 10:15 AM for suggestion purpose. Team was able to answer most of the questions as the development work was done as per client’s requirements. During the meet, most of the work is completed by the team and mainly integration part is remaining. So, the team is planning to present the solution to Mr. Kyle (Business stakeholder for Business 2 – Climate Neutral) on 10th November 2023 during “Open Office Hours with Climate Neutral– U Windsor Student Teams” call then team will ask the above-mentioned questions.

As team is mostly done with the work as per feedback from the stakeholder during our previous connect so we are not having enough questions, but we are mainly inclined towards feedback during our upcoming connect. So, the changes that will be suggested during our connect, team will work diligently to finish the work to present before final pitch competition.

One more thing, I would like to highlight about team – Even with the limited usage of tech stack, team is continuously exploring the more options to work on the Bonus Points such as designing of web pages like Carrers, Contact Us and About Page. Furthermore, team will continue to work on enhancing the solution and optimizing the performance as much as possible. In case of any suggestions/feedback, please feel free to reach out to the team members. Any additional suggestions to improve apart from main web page design, please do not hesitate.
